Product Number: 59

Intumescent Putty

Description:

Intumescent water based putty, buff coloured but could have slight variation in colour. Stays permanently flexible internally. Once face has sealed it is unaffected by moisture. An ideal product for filling round metal pipes and cables. For round plastic pipes the opening around the pipe must be a minimum of 50mm.

Can be used as a facing over PVE/foam giving extra fire protection.

If using round glass in steel frame the putty must be painted over to seal surface.

Application:

Ready to use, can be applied using a spatula or putty knife when supplied in tubs or direct from 310ml tube for a cleaner application. Tools can be cleaned in warm water.
