cable repair set; for multicore cables;
Straight-through; with glue; Cable diameter 8 - 24 mm; with enclosed splicing
connectors; medium-walled; black

## Installation Notes

### Conductor termination

Strip conductor to 10 mm.

Insert the conductor.

Check for the correct conductor position.

### Conductor removal

Twist the connector alternately left and
right while pulling it off the conductor.

## Application

Wiring conductors in a flush-mounted junction box.

Extending short wires.

Use with a shrink tube

Use of the inline splicing connector (for plugging in with a shrink tube) in the cable repair set 207-5485/316-000.
## Application

Damaged cable

Strip the damaged cable approx. 10 cm uniformly around the damaged area.

Cut out the damaged areas in the copper and disconnect all other conductors. For damaged areas between 1 mm and 30 mm, at least 30 mm of the damaged conductor must be removed. Tip: A connector (approx. 30 mm long) can be used as a length guide.

Strip conductor and conductor bridge to 10 mm specified and insert into connector. Only one connector is required for damage points < 1 mm or conductors with a flat cut. Two connectors with wire jumpers must be used for damage points > 1 mm.

Strip 10 mm conductor per specification and insert connector (example shows staggered connectors).

Pull the shrink tube over the cable end.

The shrink tube must have an overlap length of at least 30 mm on the cable sheath.

Heat the shrink tube evenly with a hot air blower between 110°C and 200°C.

The shrinking process is only completed when the shrink tube is tightly connected to the cable and the adhesive has visibly melted (see photo).
