

Responsive Audio Control.

Media Screen.

The media screen gives you access to your favourite music services. A responsive interface presents the simple, quick actions you need most often. Designed for quick and easy control of the most used actions, including zone grouping, favourite selection, and transport & volume controls.

Meta data on now playing content complete with album art provides a rich but not overwhelming experience.

Media Scenes.

In addition to the Media Screen itself, our media integrations present various scenes which can be used on the scenes screen.

These provide quick actions across one or more zones, including grouping and ungrouping all zones; playing or pausing specific zones; or even playing a specific favourite in a specific zone.

When paired with Group Scenes, these become even more powerful.

rithum and ZUMA

Some of the world's leading audio and lighting engineers developed Zuma's advanced technology, creating one of today's most sophisticated smart home devices. Now, with Rithum's premium plugin, it can be fully controlled from one interface. Rithum provides level control for both light and sound, with scenes for presets including Circadian mode.

Smart home switch

Including Zuma plug-in
