

SRN Range Consumer Units – No Neutral Terminal Bar

Modular Busbar Scalability

The busbar architecture is also modular, allowing additional sections to be joined simply by sliding them together. This enables installers to configure boards for different circuit requirements using the same system platform.

By addressing common installation challenges such as wiring congestion and circuit termination efficiency, the SRN range demonstrates how thoughtful engineering can support faster and more organised installations without compromising safety, compliance or reliability.

Scalable Busbar 100A Rated
